Introduction to Artificial Intelligence

What is AI?

Bellman (1978): Activities that we associate with human thinking, activities like decision making, problem solving, learning, etc.	Charniak and McDermott (1985): The study of mental faculties through the use of computational models.
Rich and Knight (1991): The study of how to make computers do things at which, at the moment, people are better.	Langer and Stubblefield (1993): The branch of CS that is concerned with the automation of intelligent behavior.

↓

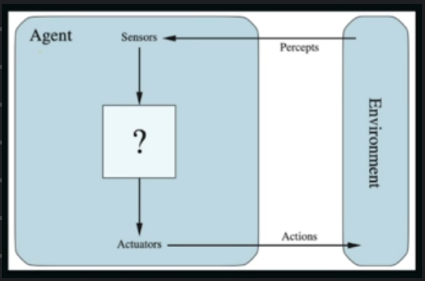

think like humans	think rationally
act like humans	act rationally

Agent func^n: mapping of percept sequence → actions

↓ implementation

agent program

Performance measure: objective criterion for success of an agent's behavior.

E.g.

vacuum cleaner agent

Agent func^n: clean the surface

Agent program: A piece of logic/code deployed on a controller.

sensors: switch

actuators: the suction motor

Performance measure: amount of dust
