```
i = 1
while i < 10:
    print(i)
    i = i//2
```

What will be the output of the program?

∞ loop

Q.

```
count = 0
for i in range(3):
    for j in range(3):
        if i+j < 3:
            count += 1
print(count)
```

What will be the output of the program?

count i j

0 0 0 1 2 3

count++

What will be the output of the program?

```
count = 0
for i in range(4):
    for j in range(4):
        if i == 2 and j > 1:
            continue
        count += 1
print(count)
```

→ condition 1

i = 0, j = 0 1 2 3

condition 1 false (count++)

i = 1 j = 0, 1, 2, 3

i = 2

condition is satisfied when j > 1

i = 3

count += 1 runs 14 times
